

Norfolk, VA – December 8, 2008 – Dataline is excited to announce that SYS-CON's Cloud Computing Journal has named Dataline as one of the most active players in the emerging cloud computing ecosystem in their article titled [*Are These the Top 100 Cloud Computing Companies in the World?*](#) by Jeremy Geelan.

Dataline - Provides cloud computing advice and expertise to the larger FSIs (i.e. Northrop Grumman, Lockheed Martin, etc) and bundles commercial cloud computing offerings in a way that meets Federal customer requirements. Although not a product vendor, the role this company fills as a mid-level Federal System Integrator is crucial to the adoption of these technologies by the public sector.

The article highlights 100 companies, listed in alphabetical order, that offer Cloud Computing as a low cost with high return business alternative in delivering scalable information technology infrastructure. Thus increasing a customer's computing capabilities without a "heavy investment in infrastructure, training or software licensing."

As a source for continuous information on cloud computing in the Federal market space, please visit www.dataline.com and <http://KevinLJackson.blogspot.com>.
